DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The primary reasons for allowance of claims 2-8 is that the applicant's claimed invention includes a cartridge having a chamber to hold a recording material used for printing, the cartridge comprising a sensor that detects a state of the recording material held in the chamber, the sensor being a piezoelectric element having a resonance state that varies with a variation in state of the recording material, a condition reception module that receives an externally specified detection condition of the sensor, a detection module that performs the detection under the specified detection condition, wherein the detection module applies an excitation pulse to the piezoelectric element and measures a vibration of the piezoelectric element in response to the excitation pulse, and an output module that outputs the result of the detection. It is this limitation, expressed in the claimed combination not found, taught, or suggested in the prior art that makes these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
